0011洛谷P5708 三角形面积

```
#include <iostream>
#include <iomanip>
#include <cmath>
using namespace std;

int main() {
    double a, b, c;
    cin >> a >> b >> c;
    double p = (a + b + c) / 2;
    double d = sqrt(p * (p - a) * (p - b) * (p - c));
```

sqrt（x）在数学上等价于x的算数平方根，源于<cmath>

```
    cout << fixed << setprecision(1);
    cout << d << endl;
    return(0);
}
```

完整代码

```
#include <iostream>
#include <iomanip>
#include <cmath>
using namespace std;

int main() {
    double a, b, c;
    cin >> a >> b >> c;
    double p = (a + b + c) / 2;
    double d = sqrt(p * (p - a) * (p - b) * (p - c));

    cout << fixed << setprecision(1);
    cout << d << endl;
    return(0);
}
```
