0027洛谷P1428 小鱼比可爱

```
#include<iostream>
using namespace std;

int main() {
    int n;
    cin >> n;
    int a[100];
    for (int i = 0;i < n;i++) {
        cin >> a[i];
    }
```

读取每个小鱼的可爱值，存入数组中

```
    for (int i = 0;i < n;i++) {
        int L = 0;
```

设可爱值不及当前小鱼的左边的小鱼的个数为L

```
        for (int j = 0;j < i;j++)
```

从0起读到i-1，i-1就是当前小鱼的底标

```
            if (a[j] < a[i]) {
                L++;
```

当小鱼j不及当前小鱼i可爱时，L增加

```
            }
        cout << L << " ";
    }
    return 0;
}
```

完整代码

```
#include<iostream>
using namespace std;

int main() {
    int n;
    cin >> n;
    int a[100];
    for (int i = 0;i < n;i++) {
        cin >> a[i];
    }

    for (int i = 0;i < n;i++) {
        int L = 0;

        for (int j = 0;j < i;j++)

            if (a[j] < a[i]) {
                L++;

            }
```

```
        cout << L << " ";
    }
    return 0;
}
```
